USING THE MEN'S ROOM POTTY

A guide to flushing

Your Questions Answered

What is a Potty?

- A potty is the thing in the bathroom you go number one or number two in.
- You should not go number three in a potty.
- You should not go “number three” in anything, as going number three is a scary and unnatural, like fast-moving zombies or Liza Minnelli.
- Potties love to be flushed. You should flush the potty when appropriate.

When should I flush the potty?

- You should flush the potty every time you use the potty.
- If you discover that someone else has used the potty and not flushed the potty already, you should flush the potty.
- If you discover that something that should be in the potty is in the potty but no one has flushed the potty, you should flush the potty.
- When something that should not be in the potty is in the potty, but you decide that it will not be a bad thing to flush the potty, you should flush the potty.

What Doesn't Go In a Potty?

There are many things that should not go in a potty. Some of them are:

- Food — You should never place food in the potty.
- Mechanical devices. Avoid putting any mechanical devices into the potty.
- Pets. Pets and other animals dislike being in the potty. Adding pets to a potty may cause the potty to malfunction.
- Utensils (eating, digging, writing) usually do not function properly after adding them to a potty.
- Quantum and other subatomic particles, while sometimes already in the potty naturally, adding others may cause unforeseen reactions with the potty or the contents of the potty resulting in serious injury or death. Do not add unstable quantum particles to the potty.
- Water. Adding additional water to the potty may cause potty malfunction. Avoid adding outside water to the potty.
- The potty is designed to accept only certain types of paper. Adding multiple types of paper (notebook, construction, drafting, etc.) paper to the potty may result in serious injury or death.

What Goes in the Potty?

- Number one. You should always put number one in the potty. Putting number one elsewhere is not part of the potty design.
- Number two. **Always** place all of number two in the potty.
- Toilet paper.
